Thanks for sharing the stakeholder requirements. Based on these requirements, here are some user stories that you can create in ZenHub:

1. As a stakeholder, I want to be able to create a product in the catalog so that I can add new products to the website.
2. As a stakeholder, I want to be able to retrieve a product from the catalog so that I can view its details.
3. As a stakeholder, I want to be able to update a product in the catalog so that I can make changes to its details.
4. As a stakeholder, I want to be able to delete a product from the catalog so that I can remove products that are no longer available.
5. As a stakeholder, I want to be able to “Like” a product in the catalog so that customers can indicate their preference for certain products.
6. As a stakeholder, I want to be able to “Dislike” a product in the catalog so that customers can indicate their dislike for certain products.
7. As a stakeholder, I want to be able to list all products in the catalog so that customers can view all available products.
8. As a stakeholder, I want to be able to query a subset of products in the catalog so that customers can search for specific products based on certain criteria.
9. As a stakeholder, I want the backend product catalog for the e-commerce website hosted on cloud environment with automated deployments so that it is easy and efficient to deploy new changes and updates.

You can use these user stories as a starting point and further refine them as needed.
